

DEVELOPING DATA

In early 2008, UCAOA revamped its annual survey in conjunction with researchers at Massachusetts General Hospital and Harvard University with the goal of assuring that the UCAOA Benchmarking Committee's efforts produced a scientifically valid report. Here, we present some of the data from this landmark survey.

In this issue: How common is it for urgent care centers to process lab tests onsite—and what tests are they, typically?

LAB TESTS PROCESSED ONSITE

The question regarding lab tests was just one segment of a section of questions on services offered in urgent care centers. In the June issue of *JUCM*, Developing Data will report on services such as administration of intravenous fluids, sports and school physicals, and travel medicine.

Acknowledgment: Data submitted by Robin M. Weinick, PhD, at the time of the survey assistant professor, Harvard Medical School and senior scientist, Institute for Health Policy, Massachusetts General Hospital. Dr. Weinick is also a member of the *JUCM* Advisory Board. Financial support for this study was provided by UCAOA.

If you are aware of new data that you've found useful in your practice, let us know via e-mail to editor@jucm.com. We'll share your discovery with your colleagues in an upcoming issue of *JUCM*.
