

# DEVELOPING DATA

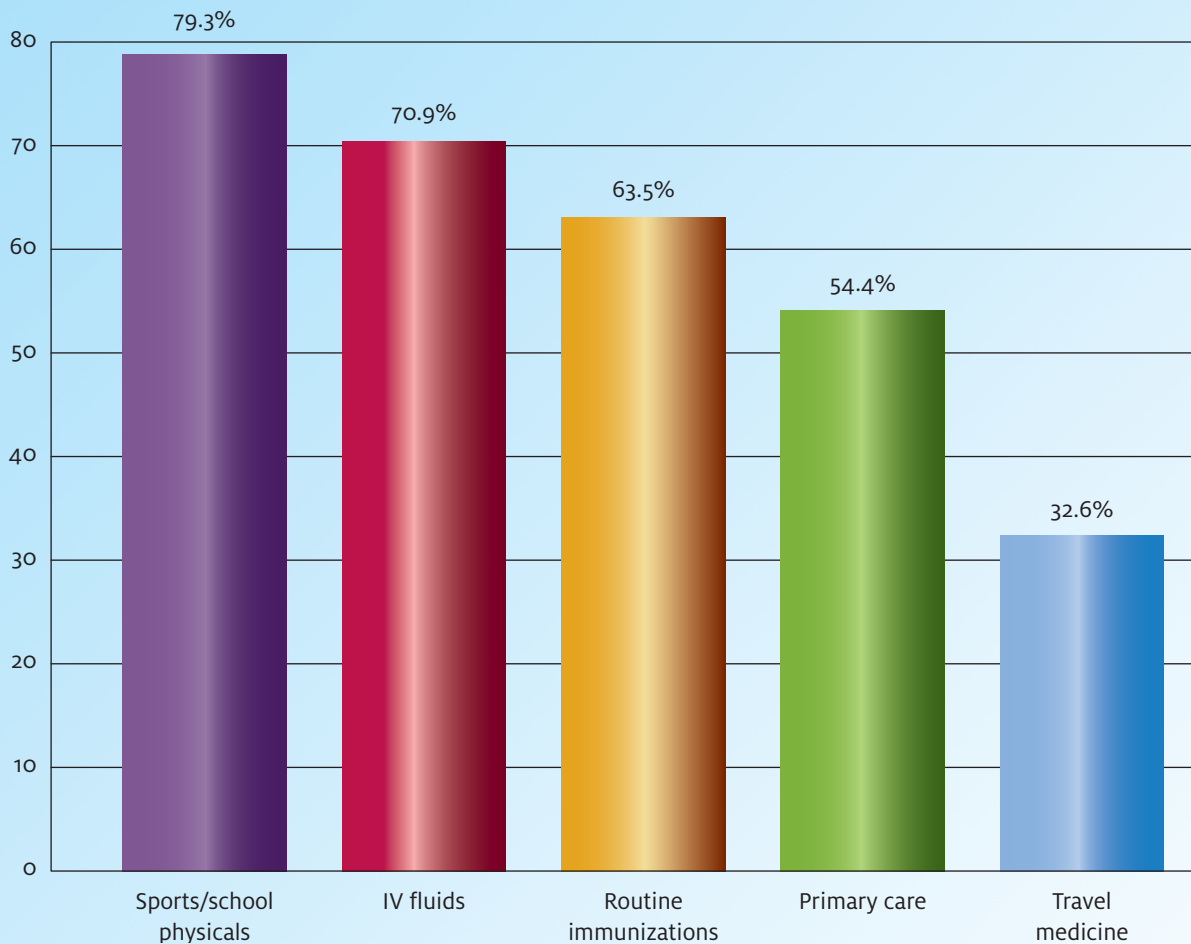

In early 2008, UCAOA revamped its annual survey in conjunction with researchers at Massachusetts General Hospital and Harvard University with the goal of assuring that the UCAOA Benchmarking Committee's efforts produced a scientifically valid report.

Here, we present some of the data from this landmark survey.

As reported in the May installment of Developing Data, 93.3% of urgent care centers offer lab tests of one kind or another on the premises. In March, we told you that 92.6% offer occupational medicine services.

*In this issue:* What "other treatments and services" are most likely to be offered at urgent care centers?

## 'OTHER' TREATMENTS AND SERVICES OFFERED ON SITE

Acknowledgment: Data submitted by Robin M. Weirick, PhD, at the time of the survey assistant professor, Harvard Medical School and senior scientist, Institute for Health Policy, Massachusetts General Hospital. Dr. Weirick is also a member of the *JUCM* Advisory Board. Financial support for this study was provided by UCAOA.

If you are aware of new data that you've found useful in your practice, let us know via e-mail to [editor@jucm.com](mailto:editor@jucm.com). We'll share your discovery with your colleagues in an upcoming issue of *JUCM*.
