

In each issue, *JUCM* will challenge your diagnostic acumen with a glimpse of x-rays, electrocardiograms, and photographs of dermatologic conditions that real urgent care patients have presented with.

If you would like to submit a case for consideration, please email the relevant materials and presenting information to editor@jucm.com.

FIGURE 1

The patient, a 9-month-old male, suffered a blow to his left shoulder.

View the image taken (**Figure 1**) and consider what your diagnosis would be.

Resolution of the case is described on the next page.

THE RESOLUTION

FIGURE 2

Diagnosis: The x-ray reveals a mid-clavicular fracture (arrow). Pain control and follow up are appropriate for this patient. Abuse should be suspected because this is a severe fracture for a 9-month-old infant.

Medical Centers, Jerusalem,
Israel.*

FIGURE 1

The patient, an 87-year-old woman, presented with a circular and pruritic rash that had been present on her right shin for 3 days. She had no fever.

View the image taken (**Figure 1**) and consider what your diagnosis would be.

Resolution of the case is described on the next page.

THE RESOLUTION

FIGURE 1

The photograph demonstrates nummular eczema, which presents as a coin-shaped dermatitis, most commonly on hands and legs.

The most common peak occurrence is in the seventh decade of life. Treatment includes skin moisturizers, topical steroids and, if secondary infection occurs, oral antibiotics.
