

In each issue, *JUCM* will challenge your diagnostic acumen with a glimpse of x-rays, electrocardiograms, and photographs of dermatologic conditions that real urgent care patients have presented with.

If you would like to submit a case for consideration, please email the relevant materials and presenting information to editor@jucm.com.

FIGURE 1

The patient, a 12-year-old female, presented after twisting her right ankle. She could not bear weight on her right leg.

View the image taken (**Figure 1**) and consider what your diagnosis would be.

Resolution of the case is described on the next page.

THE RESOLUTION

FIGURE 2

Diagnosis: The x-ray reveals a Salter-Harris III fracture of the distal tibia (arrow). Salter-Harris III fractures involve the epiphysis and physis. This child's growth plates have already begun to fuse. Urgent follow up with orthopedics is necessary for this fracture.

Acknowledgement: Case presented by Nahum Kovalski, BSc, MDCM, Terem Emergency Medical Centers, Jerusalem, Israel.
