

# DEVELOPING DATA

Data from the 2014 Urgent Care Chart Survey of 1,778,075 blinded patient visits to more than 800 different urgent care clinics, conducted by the *Journal of Urgent Care Medicine*, show that the 2 largest age groups of patients using urgent care centers were 21 to 30 years (17.1%) and 31 to 40 years (15.9%); the smallest age group was 51 to 60 years (11.9%).

The survey's methodology and data abstraction forms were initially designed in 2008 by researcher Robin M. Weick, PhD, then an assistant professor at Harvard Medical School and a senior scientist at the Institute for Health Policy at Massachusetts General Hospital, and now associate director of RAND Health.

## PATIENT AGE BREAKOUT FOR THE U.S. URGENT CARE MARKET IN 2014
